

18. A method for making a detergent composition according to claim 16 in which a first stream of detergent base particles is added to the mixer; a second stream comprising the detergent active particulates is added to the mixer and binder also present in the mixer effects adhesion of the detergent active particulates to the detergent base particles.

19. A method according to claim 18 in which the binder is added by a third stream directly into the mixer.

20. A method according to claim 16 in which a binder is added to the detergent base particles or the detergent active particulate prior to their addition to the mixer.

21. A method according to claim 16 in which the geometric mean particle diameter of the detergent active particulate is no greater than 20% of the geometric mean particle diameter of the detergent base particles.

22. A method according to claim 21 in which the geometric mean particle diameter of the detergent active particulates is no greater than 10% of the geometric mean particle diameter of the detergent base particles.

23. A detergent composition according to claim 22 in which the geometric mean particle diameter of the detergent active particulates is no greater than 5% of the geometric mean particle diameter of the detergent base particles.

24. A method according to claim 16 in which the detergent active particulates comprise photobleach.

25. A method according to claim 16 in which the detergent active particulates comprise solid particles comprising perfume.

26. A method according to claim 16 in which the geometric mean particle diameter of the detergent active particulates is no greater than 150 microns.

27. A method according to claim 16 in which the low shear mixer comprises a rotating drum mixer.

28. A method according to claim 16 in which the detergent base particles comprise agglomerates, particulate detergent raw materials, spray dried powders or mixtures thereof.

29. A detergent particle obtainable by a method according to claim 16.

30. A detergent composition comprising detergent particles according to claim 29.

Conclusion

Support for these amendments is found in the claims as originally filed. These amendments are entered to bring the claims into conformance with 37 CFR §1.75; no new matter is added.

Respectfully submitted,

By M. Dressman
